Electric Vehicle Supply Equipment (EVSE) Test Report: ChargePoint

### EVSE Features
- WiFi, cellular communications
- Automated meter infrastructure
- Vacuum florescent display
- User charge scheduling

### EVSE Specifications
- Grid connection: Hardwired
- Connector type: J1772
- Test lab certifications: UL listed
- Approximate size (H x W x D inches): 13 x 17.2 x 4
- Charge level: AC Level 2
- Input voltage: 208VAC to 240 VAC
- Maximum input current: 30 Amp
- Circuit breaker rating: 40 Amp

### Test Conditions
1. Test date: 10/11/2011
2. Nominal supply voltage (Vrms): 213.39
3. Supply frequency (Hz): 60.00
4. Initial ambient temperature (°F): 85

### Test Vehicle
1. Make and model: 2011 Chevrolet Volt
2. Battery type: Li-ion
3. Steady state charge power (AC kW): 3.16
4. Maximum charge power (AC kW): 3.40

### EVSE Test Results
1. EVSE consumption prior to charge (AC W): 6.9
2. EVSE consumption during steady state charge (AC W): 23.6
3. EVSE consumption post charge (AC W): 6.8
4. Efficiency during steady state charge: 99.26%

NOTE: Charge start and charge end power demand curves are dependent upon the vehicle

1. Hioki 3390 Power Meter used for all current and voltage measurements
2. Measurements were taken at EVSE grid connection and J1772 connection
3. Steady state charge power is the most common power level dictated by the vehicle during the charge
4. Steady state charge refers to the portion of the charge when power was greater than or equal to steady state charge power
