

Mileage Accumulation and Fuel Economy 2012 Mitsubishi i-MiEV BEV - September 2016

Two model year 2012 Mitsubishi i-MiEV battery electric vehicles (BEVs) entered Accelerated Testing during April 2013 in a fleet in Arizona. Each i-MiEV will be operated for 36,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The two 2012 Mitsubishi i-MiEV BEVs have been driven a total of 46,886 miles. The cumulative average electricity consumption is 317.4 AC Wh/mile. Monthly electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site. Note that initial mileage accumulation was slow due to baseline performance and battery testing.
