

## Mileage Accumulation and Fuel Economy 2014 BMW i3 BEV - September 2016

Four model year 2014 BMW i3 battery electric vehicles (BEVs) entered Accelerated Testing during December 2014 in a fleet in Arizona. Each i3ev will be operated for 36,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four 2014 BMW i3 BEVs have been driven a total of 68,523 miles. The cumulative average electricity consumption is 300.0 AC Wh/mile. Monthly electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site.
