

## 2014 BMW i3 EV BEV Accelerated Testing - June 2015

Four model year 2014 BMW i3 EV battery electric vehicles (BEVs) entered Accelerated Testing during December 2014 in a fleet in Arizona. Each i3ev will be operated for 60,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four 2014 BMW i3 EV BEVs have been driven a total of 24,340 miles. The cumulative average electricity consumption is 261.7 AC Wh/mile. Monthly electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site.
