

Mileage Accumulation and Fuel Economy 2013 Ford C-Max HEV - September 2016

Four model year 2013 Ford C-Max hybrid electric vehicles (HEVs) entered Accelerated Testing - one during June 2013 and the other three during December 2013 in a fleet in Arizona. Each C-Max will be operated for 195,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four 2013 Ford C-Max HEVs have been driven a total of 601,125 miles. The cumulative average fuel economy is 37.3 mpg. Monthly gasoline consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site.
