

Honda CRZ HEV Accelerated Testing – March 2014

Two model year 2011 Honda CRZ hybrid electric vehicles (HEVs) entered Accelerated testing during August 2010 in a fleet in Arizona. Each CRZ will be operated for 160,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The two 2011 Honda CRZ HEVs have been driven a total of 319,960 miles and the cumulative average fuel economy is 35.9 mpg. Note that initial mileage accumulation was slow due to baseline performance and battery testing.
