- Recorded results vary for many reasons, including driving conditions, drive quality and the vehicle maintenance.
- "Overall DC electrical energy consumption (DC Wh/mi)" is based on net DC electricity discharged from or charged to the plug-in battery pack and distance driven during all trips in the reporting period.
- Trips when the plug-in battery pack was depleted to propel the vehicle throughout entire trip. NOTE: Normal operation of the Blended Architecture in Ford C Max Energi permits the use of the ICE in CD mode.
- Based on the net DC electricity discharged from the plug-in battery pack and the distance driven during charge depleting (CD) trips in the reporting period.
- Trips when the plug-in battery pack was depleted to propel the vehicle for a portion of the trip, but was fully depleted, and the vehicle operated as a conventional HEV for the remainder of the trip.
- Based on the net DC electricity discharged from the plug-in battery pack and all distance driven during trips in both charge depleting and charge sustaining (CD/CS) modes in the reporting period.
- Trips when the vehicle operated as a conventional HEV.
