Trips when the plug-in battery pack charge is depleted to propel the vehicle throughout entire trip

Trips when the plug-in battery pack is depleted to propel the vehicle for a portion of the trip, but is fully depleted prior to the end of the trip

** Trips when the plug-in battery pack is not used to propel the vehicle - either the plug-in battery is fully depleted before the beginning of the trip, or the plug-in battery pack is turned off

"Number of trips with plug-in battery pack turned off by the vehicle operator" is a subset of number of trips in combined CD/CS and CS mode

"Distance traveled with plug-in battery pack turned off" is a subset of distance traveled in combinecd CD/CS and CS modes

Effect Of Driving Aggressiveness on Fuel Economy This Year

Aggressiveness factor is based on accelerator pedal position. The more time spent during a trip at higher accelerator pedal position, the higher the trip aggressiveness.

Time of Day When Charging

Time at the Start of Charging Events

*Average duration of charging event is the average length of time per charging event when the vehicle was plugged into the electrical grid. Electrical energy was not necessarily drawn during the entire period when the vehicle was plugged in.
