

Ford C-Max Energi PHEV Accelerated Testing – March 2014

Four model year 2013 Ford C-Max Energi plug-in hybrid electric vehicles (PHEVs) entered Accelerated testing - one during June 2013 and the other three during December 2013 in a fleet in Arizona. Each C-Max Energi will be operated for 195,000 miles, at which point their traction batteries will be tested before they are retired (their traction batteries are also tested when new). One-page vehicle maintenance logs are posted on nearby [www](#) pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four 2013 Ford C-Max Energi PHEVs have been driven a total of 37,056 miles. Monthly gasoline and electricity consumption for each vehicle is captured in the vehicle specific fact sheet on the AVTA web site.
