ARRA Grid-Connected Vehicles Transportation Electrification Demonstrations and Education Projects, and INL Data Collection Support

Clean Cities 2010 Coordinator Leadership Retreat – Rapid City, S.D.

Jim Francfort
DOE’s Advanced Vehicle Testing Activity
Idaho National Laboratory
September 2010

This presentation does not contain any proprietary or sensitive information
Presentation Outline

• INL / AVTA background, description and testing approach
• Vehicle technologies tested / in testing (PHEVs, HEVs, NEVs, HICEVs, BEVs, and UEVs)
• Sample of PHEV analysis and test results
• American Recover and Reinvestment Act (AARA)
  – Transportation Electrification Demonstration Activities
  – Transportation Electrification Education Programs
• EV Project data collection and reporting methods for 23,600 vehicles and charging infrastructure units
• Other data collection / testing activities
• WWW site address
Idaho National Laboratory

- Eastern Idaho based U.S. Department of Energy (DOE) Federal laboratory
- 890 square mile site with 3,600 staff
- Support DOE’s strategic goal:
  - Increase U.S. energy security and reduce the nation’s dependence on foreign oil
- Multi-program DOE laboratory
  - Nuclear Energy
  - Fossil, Biomass, Wind, Geothermal and Hydropower Energy
  - Advanced Vehicles and Battery Development
  - Energy Critical Infrastructure Protection
AVTA Description

• Advanced Vehicle Testing Activity (AVTA) is conducted by INL for DOE’s Vehicle Technologies Program
• AVTA tests light-duty vehicles, battery subsystems, and fueling infrastructures that employ / support:
  – 100% Electric and dual-fuel electric drive systems
  – Advanced energy storage systems
  – Some ICE 100% Hydrogen and HCNG blended fuels
  – Advanced control systems (i.e., start/stop HEVs)
• Provide benchmarked vehicle and infrastructure testing results to R&D programs, modelers, OEMs, battery manufacturers, and target/goal setters (DOE)
• Assist early adaptor fleet managers and the general public in making informed vehicle purchase, deployment and operating decisions
• Presentations to industry groups, including via Clean Cities’ sponsored webinars and symposiums
Vehicle Testing Approach

• Depending on vehicle technology and capabilities, vehicles are tested via:
  – Closed test tracks
  – Dynamometer testing
  – Laboratory testing (batteries)
  – Accelerated testing, using dedicated drivers and other methods to accumulate miles and cycles
  – Fleet testing, uses unstructured vehicle utilization
  – Different testing methods are used to balance testing control/repeatability, sample size, and costs

• Current INL staff has used onboard data loggers to document vehicle and charging operations since 1993

• Publish testing results in relevant ways to accurately
  – Document real-world petroleum reduction potentials
  – Document fuel and infrastructure use
  – Document life-cycle risks and costs
Testing by Vehicle Technology

- **Plug-in hybrid electric vehicles (PHEVs)**
  - 12 models, 259 vehicles, 2+ million test miles
- **Hybrid electric vehicles (HEVs)**
  - 21 models, 54 vehicles, 5+ million test miles
- **Neighborhood electric vehicles (NEVs)**
  - 23 models, 200,000 test miles
- **Hydrogen internal combustion engine (HICE) vehicles**
  - 7 models, 500,000 test miles
- **Full-size battery electric vehicles (BEVs)**
  - 41 EV models, 5+ million test miles
- **Urban electric vehicles (UEVs)**
  - 3 models, 1 million test miles

- 14 million test miles have been accumulated on 1,600 electric drive vehicles representing 107 different electric drive models
Most Vehicle Conversions

- Prius & Escapes
- Li-ion Batteries

Public + Private Partners

Data analysis & Reporting

294 Total
247 Operating
35 Coming ‘10
12 Out of Service
PHEV 3-Page Report

- Report by charge mode:
  - Charge depleting (CD)
  - Charge sustaining (CS)
  - Mixed (CD/CS)
- All trips, 49 mpg, 59 AC Wh/mi & 43 DC Wh/mi
- CD, 62 mpg & 140 DC Wh/mi
- CD/CS, 53 mpg & 49 DC Wh/mi
- CS, 43 mpg
- Report represents 1.2 million Hymotion Prius test miles and 125,000 trips
PHEV 3-Page Report

- Report fuel use by highway/city cycles and driver style
  - CD city, 60 mpg (62%+), 165 DC Wh/mi
  - CD highway, 66 mpg (47%+), 109 DC Wh/mi
  - CS city, 37 mpg
  - CS highway, 45 mpg
  - Less aggressive driving (0 to 20%) averages ~80 mpg
    - (Aggressiveness = accelerator pedal position)
PHEV 3-Page Report

- Report charging stats, time of day driving, and charging profiles
- Average 1 charging event per day when PHEV driven
- 44.8 miles between charge events
- 4.8 trips between charge events
- 2.8 hours per charge
- 20.9 hours time plugged in per charge
- 2.6 AC kWh per charge event
PHEV Ambient Temperature MPG Impacts

Hymotion Prius Fleet Fuel Economy

Average Fuel Economy [MPG]

Average Ambient Temperature [°C]

< -20C, -20 to -10C, -10 to 0C, 0 to 10C, 10 to 20C, 20 to 30C, 30 to 40C, > 40C

All Trips, CD, CD/CS, CS
Engine Operation is a Main Factor for PHEV Fuel Economy Changes

Hymotion Prius PHEVs – CD Trips

- MPG and aggressive driving impacts March ‘08 – May ‘09

Data from 150 Hymotion Prius with V2Green and Kvaser loggers
HEV Testing

- 5 million total HEV testing miles
- 21 HEV models and 54 HEVs tested to date:
  - 6, 2001 Honda Insight
  - 6, 2002 Gen I Toyota Prius
  - 4, 2003 Gen I Honda Civic
  - 2, 2004 Chevrolet Silverado
  - 2, 2004 Gen II Toyota Prius
  - 2, 2005 Ford Escape
  - 2, 2005 Honda Accord
  - 3, 2006 Lexus RX 400h
  - 2, 2006 Toyota Highlander
  - 2, 2006 Gen II Honda Civic
  - 2, 2007 Saturn Vue
  - 2, 2007 Toyota Camry
  - 2, 2008 Nissan Altima
  - 2, 2008 GM 2-mode Tahoe
  - 2, 2010 Ford Fusion
  - 2, 2010 Toyota Prius
  - 2, 2010 Honda Insight
  - 2, 2010 Mercedes Benz S400
  - 3, 2010 Smart Fortwo Pure Coupe
  - 2, 2010 MazDA 3 Hatchback
  - 2, 2010 Volkswagen Gold TDI.

- HEV testing includes beginning and high mileage HEV traction battery testing and reporting
HEV Air Conditioning use MPG Impacts

Percent MPG Difference (J1634 With & W/O Air)

- Gen I Insight: -24.0%
- Gen I Prius: -24.0%
- Gen I Civic: -27.0%
- Gen II Prius: -21.6%
- Silverado: -19.6%
- Accord: -14.9%
- Escape: -18.5%
- Highlander: -22.1%
- RX400h: -25.1%
- Gen II Civic: -21.7%
- Camry: -28.4%
- Vue: -22.1%
- Altima: -14.6%
- Tahoe: -24.4%
- Gen III Prius: -24.3%
- Gen II Insight: -23.1%
- Ford Fusion: -28.7%
- Mercedes S400: -28.7%
- Average: -21.8%
NEV Testing

- CARB requires all NEVs be tested by AVTA to be eligible for incremental funding
Hydrogen ICE Fact Sheet

- Twelve 2005 Chevrolet Silverado 1500HD pickups
- Operating in Canada and the U.S.
- Onboard data logger generated results
- 10.5 GGE ~100% H₂ onboard storage
- cost data monitoring activity
American Recovery and Reinvestment Act (ARRA)

- $2 Billion in DOE grants to establish advanced battery, power electronics and motors manufacturing
- $400 Million for Transportation Electrification Demonstration, Infrastructure, and Education
  - 8 Awards totaling over $360M for grid-connected vehicle and infrastructure demonstrations
  - 13,000 vehicles from 9 OEMs and over 22,000 charging stations will be deployed across America
  - Vehicle performance and grid impact data will be gathered and analyzed to support the development of vehicle technologies and grid infrastructure
- 10 Grants totaling $39M for Electric Drive Education
  - Graduate, under-gad and Jr. colleges
  - 1st Responders, mechanics and public education
Transportation Electrification Demonstration Activities

Electric Transportation Engineering Corporation - AWARD: $114.8M

- Demonstration of 5,700 Nissan Leaf EVs and 2,600 Chevy Volt EREVs
- Deployment of 15,000 Level 2 electric vehicle supply equipment (EVSE) charging Stations (EVSE) and 300 fast chargers, in 16 metropolitan areas
- Full instrumentation of vehicles and infrastructure for comprehensive data-collection and analysis effort

Chrysler, LLC - AWARD: $48M

- Development, validation, and deployment of 140 PHEV Dodge Ram pickups
- Deployment of vehicles through 11 partner fleets across a wide range of geographic, climatic, and operating environments
Transportation Electrification Demonstration Activities (cont’d)

South Coast Air Quality Management District - AWARD: $45.4

- Development of a fully integrated production PHEV system for Class 2-5 vehicles (8,501-19,500 lbs GVWR).
- Demonstration of 378 trucks and shuttle buses through network of partner fleets.
- SCAQMD based in Diamond Bar, CA; Manufactured in Galesburg, MI, and Elizabethtown, KY.

Coulomb Technologies - AWARD: $15M

- Deployment of approximately 4,000 public and private charging stations in up to 9 U.S. Cities.
- Locations will be coordinated with OEM deployment of 400 grid connected vehicles.
Transportation Electrification Demonstration Activities (cont’d)

Navistar, Inc. - AWARD: $39.2M

• Develop, validate, deploy 950 advanced Battery Electric delivery trucks (12,100 lbs GVWR) with a 100-mile range
• Manufacturing in Elkhard Co., IN; Deployment in Portland, Chicago, and Sacramento

Cascade Sierra Solutions - AWARD: $22.2M

• Deployment of truck stop electrification infrastructure at 50 sites along major US interstate corridors
• Provide 5,450 rebates of 25% of the cost for truck modification to incorporate idle reduction technologies
Transportation Electrification Demonstration Activities (cont’d)

**General Motors - AWARD: $30.5M**
- Develop, analyze, and demonstrate 125 Chevy Volt EREVs for electric utilities and 500 Volt EREVs to consumers
- Manufacturing in Detroit, MI; Deployment in conjunction with several utility partners

**Smith Electric Vehicle - AWARD: $32M**
- Develop and deploy up to 500 medium-duty electric trucks.
- Manufacturing in Kansas City, MO; Deployment in conjunction with 20 launch partners representing a range of commercial and public sector markets, geographies, and climates

INL ARRA Data Collection Support

• INL tasked with data collection, analysis and reporting for four light-duty vehicle and infrastructure deployment projects:
  - EV Project: 8,300 Leaf EVs and Volt EREV, and 15,300 eTec Level 2 EVSE and fast chargers. All 23,600 pieces of equipment are equipped with data loggers (DLs)
  - 140 Chrysler Ram PHEV Pickups with DLs
  - 125 General Motors Volts with DLs
  - 4,000 Level 2 EVSE deployed by Coulomb with DLs
• Data protected by numerous Non Disclosure Agreements with participant partners
EV Project - Overview

- $230 million total project funded by a US Department of Energy grant ($115 million) via the American Recovery and Reinvestment Act (ARRA)
- Partners cost share match greater than $115 million
- Lead by Electric Transportation Engineering Corporation (eTec) (renamed Ecotality NA)
- Data will be collected by INL via data streams from eTec (charging infrastructure), and Nissan and General Motors/OnStar (vehicles)
- EV Project purpose is to build and study mature electric vehicle charging infrastructure in eight regions – 16 cities
- Product: Take the lessons learned from the deployment of these first 8,300 EVs and the 15,300 charging infrastructure units supporting them, to enable the streamlined deployment of the next 5,000,000 EVs

Level II EVSE & Fast Chargers
EV Project - Infrastructure Data Collected per Charge Event

- Date/Time Stamp
- Unique ID for Charging Event
- Unique ID Identifying the EVSE – may not change
- Connect and Disconnect Times (plugged in and out)
- Start and End Charge Times
- Max Instantaneous Peak Power
- Average Power
- Total energy (kWh) per charging event
- Rolling 15 Minute Average Peak Power
- And other non-dynamic EVSE information (GPS, ID, type, contact info, etc.)
EV Project - Vehicle Data Collected per each Start / Stop Event

- Vehicle ID
- Date/Time Stamp
- Event type (key on / key off)
- Odometer
- Battery state of charge
- GPS (longitude and latitude)
- Liquid fuel consumption (some vehicles)
- Recorded for each key-on and key-off event
INL Vehicle Data Management Process

Protected Data

- Parameters range check
- Lame data check
- Missing/empty parameter check
- Conservation of energy check
- SOC continuity
- Transfer completion

Protected Data

- INL Pulls using FTPS/SFTP
- INL transmits results to DOE and OEMs

Internal data quality reports

Fleet summary reports - public

INL Protect Enclave - EV Project member access only

INL Internal firewall

INL DMZ Firewall – Public only has access to AVT.INL.GOV

Car Data

OEM Data Management System

INL Vehicles

لل교육، استنادًا إلى الأسئلة الخاصة، يمكن التحقيق في المعلومات المذكورة في الصورة والنص النقدي المقدم، والعمل على قراءة النص الطبيعي للرسالة.
INL Vehicle Data Management Process

- **Vehicle Data**
  - Access restricted by firewall rules
  - EV Project FTP/S FTP server

- **Protected Data**
  - EV Project Team
  - Data quality reports
  - INL Protect Enclave - EV Project member access only

- **OEM Data**
  - Manage-ment System
  - OEM pushes using FTP/S FTP

- **INL Pulls**
  - INL pulls with encrypted transmission
  - INL transmits data to DOE And OEMs

- **INL Protect Enclave**
  - INL Internal firewall
  - INL DMZ Firewall – Public has access to AVT.INL.GOV

- **AVT.INL.GOV**
  - INL Pulls with encrypted transmission
  - Reports posted on WWW

- **Fleet summary reports - public**

- **INL DMZ Firewall – Public has access to AVT.INL.GOV**
EV Project - Reporting

• INL will analyze and report on the charging infrastructure utilization (Level II EVSE units and fast chargers) by the 8,300 Leaf and Volt drivers

• INL will report on driver/vehicle charging patterns, and charging infrastructure utilization patterns

• Many of the 42+ EV Project partners are electric utilities with high interest in demand / smart charging controls, including multitier time-of-day pricing and micro grid analysis

• Fast charge / grid energy storage test component is also being developed

• Reporting targets include: DOE/governments, OEMs, electric utilities, public, etc.

• Specialty analyses will include micro grid and other variable influences
EV Project - Fact Sheet Reporting

• Driving (by reporting period)
  – Number of trips
  – Distance driven (miles)
  – Average number of trips between charging events
  – Average distance between charging events

• Charging Infrastructure
  – EV Project vehicle charging
    • Number of charging events
    • Percent of all charging events
    • Total time plugged in (hours)
    • Percent of all time plugged in
  – Non-EV Project vehicle charging events
    • Number of charging events
    • Percent of all charging events
EV Project Summary

• Utilize a systematic process for planning and installing charging infrastructure – eTec’s Micro-Climate© process
  – Document travel patterns
  – Document charging patterns
• Provide feedback on infrastructure deployment decisions
• Reporting can not begin until after Dec. 2010 start to vehicle and infrastructure roll-outs, and data analyzed
• Successful grid-connected electric drive vehicle deployment is dependent on successful infrastructure deployment
• Future charging infrastructure deployments must be based on real-world travel and charging patterns
• Goal is to replace internal combustion engine vehicles with grid connected, and infrastructure dependant, electric drive vehicles
Other Ongoing Specialty INL Data Collection Projects

- Ford’s 22 PHEV Escape SUVs
  - Data collection for Ford’s PHEV SUVs and Chrysler Ram Pickups include 25+ onboard parameters, such as charging and driving profiles, and vehicle performance; collected via the CAN and data loggers

- Other OEM vehicles may be added

- Five USPS electric long life vehicle (ELLV) conversions
  - ELLVs required five customized onboard data loggers
  - Testing to USPS and AVTA test procedures and cycles

- Development of vehicle-based battery test-bed mule
