U.S. Department of Energy's Vehicle Technologies Program

GITT 2013 - EV Project Charging Infrastructure Usage and Other Infrastructure Activities

Jim Francfort
Idaho National Laboratory

USDRIVE Grid Interaction Tech Team
USCAR, Southfield, Michigan
March 12, 2013

This presentation does not contain any proprietary or sensitive information

Presentation Outline

- INL and Vehicle Technology Experience and General Data Collection Methods
- EV Project results to date (majority of presentation)
- ChargePoint results to date
- Conductive Charging Infrastructure Testing
- Wireless Charging Infrastructure Testing
- Other Testing Activities
- Summary
- Where you can find this presentation

INL and Vehicle Technology Experience and General Data Collection Methods

3

Idaho National Laboratory

- U.S. Department of Energy (DOE) laboratory
- 890 square mile site with 4,000 staff
- Support DOE's strategic goal:
  - Increase U.S. energy security and reduce the nation's dependence on foreign oil
- Multi-program DOE laboratory
  - Nuclear Energy
  - Fossil, Biomass, Wind, Geothermal and Hydropower Energy
  - Advanced Vehicles and Battery Development
  - Homeland Security and Cyber Security

4

AVTA Participants

- The Advanced Vehicle Testing Activity (AVTA) is the U.S. Department of Energy, Vehicle Technologies Program's (VTP) singular field, tract, and laboratory based source of testing light-duty whole vehicle systems and subsystems
  - Idaho National Laboratory manages the AVTA for VTP
  - ECOtality provides testing support via a competitively bid NETL (National Energy Testing Laboratory) contract
- For the EV Project, ECOtality is the project lead and INL provides data collection, analysis and dissemination support
- Test partners include electric utilities, Federal, state and local government agencies, private companies, and individual vehicle owners

5

AVTA Goals

- The AVTA goals
  - Petroleum reduction and energy security
  - Benchmark technologies that are developed via DOE research investments
- Provide benchmark data to DOE, National Laboratories (ANL, NREL, ORNL, PNNL), Federal Agencies (DOD, DOI, DOT, EPA, USPS), technology modelers, R&D programs, vehicle manufacturers (via USCAR's VSATT, EESTT, GITT), and target and goal setters
- Assist fleet managers, via Clean Cities, FEMP and industry gatherings, in making informed vehicle and infrastructure deployment and operating decisions

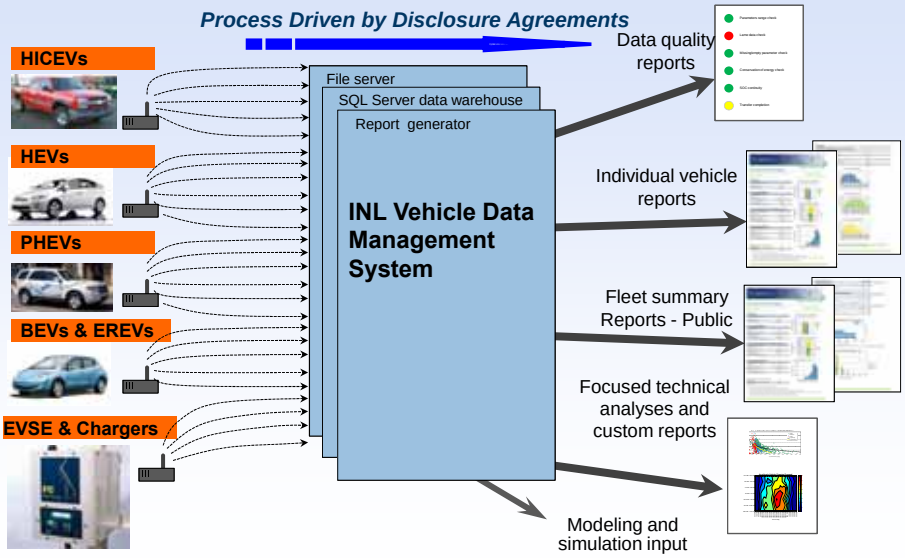
6

Vehicle / Infrastructure Testing Experience

- **86 million test miles accumulated on 11,400 electric drive vehicles representing 115 models. 1 million miles / week**
- **EV Project: 7,885 Leafs, Volts and Smart EVs, 10,757 EVSE and DC Fast Chargers (DCFC), 68 million test miles**
- **ChargePoint: 3,908 EVSE reporting 761,000 charge events**
- **PHEVs: 14 models, 430 PHEVs, 4 million test miles**
- **EREVs: 1 model, 150 EREVs, 900,000 test miles**
- **HEVs: 21 models, 52 HEVs, 6.2 million test miles**
- **Micro hybrid (stop/start) vehicles: 3 models, 7 MHVs, 509,000 test miles**
- **NEVs: 24 models, 372 NEVs, 200,000 test miles**
- **BEVs: 47 models, 2,000 BEVs, 5 million test miles**
- **UEVs: 3 models, 460 UEVs, 1 million test miles**
- **Other testing includes hydrogen ICE vehicle and infrastructure testing**

7

INL Vehicle/EVSE Data Management Process



8

Data Collection, Security and Protection

- **All vehicle, EVSE, and PII raw data is legally protected by NDAs (Non Disclosure Agreements) or CRADAs (Cooperative Research and Development Agreements)**
  - **Limitations on how proprietary and personally identifiable information can be stored and distributed**
  - **Raw data, in both electronic and printed formats, is not shared with DOE in order to avoid exposure to FOIA**
  - **Vehicle and EVSE data collection would not occur unless testing partners trust INL would strictly adhere to NDAs and CRADAs**
  - **Raw data cannot be legally distributed by INL**

9

EV Project results to date

10

EV Project Goal, Locations, Participants, and Reporting

- Goal: Build and study mature charging infrastructures and take the lessons learned to support the future streamlined deployment of grid-connected electric drive vehicles
- ECOtality is the EV Project lead, with INL, Nissan and Onstar/GM as the prime partners, with more than 40 other partners such as electric utilities
- 40 different EV Project reports are generated quarterly for the general public, DOE, ECOtality, project participants, industry, regulatory organizations, as well as per special requests

11

EV Project – EVSE Data Parameters Collected per Charge Event

- Data from ECOtality's Blink & other EVSE networks
- Connect and Disconnect Times
- Start and End Charge Times
- Maximum Instantaneous Peak Power
- Average Power
- Total energy (kWh) per charging event
- Rolling 15 Minute Average Peak Power
- Date/Time Stamp
- Unique ID for Charging Event
- Unique ID Identifying the EVSE
- And other non-dynamic EVSE information (GPS, ID, type, contact info, etc.)

12

EV Project – Vehicle Data Parameters Collected per Start/Stop Event

- Data is received via telematics providers from Chevrolet Volts and Nissan Leafs
- Odometer
- Battery state of charge
- Date/Time Stamp
- Vehicle ID
- Event type (key on / key off)
- GPS (longitude and latitude)
- Recorded for each key-on and key-off event

- Additional data is received monthly from Car2go for the Smart EVs

13

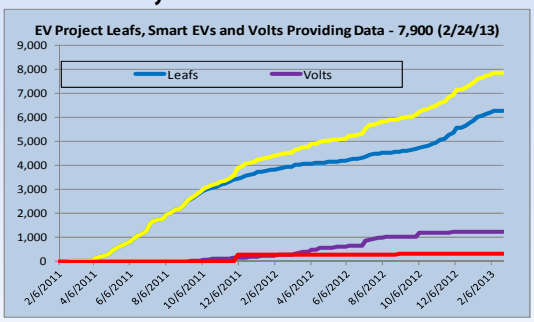
EV Project Data Complexity

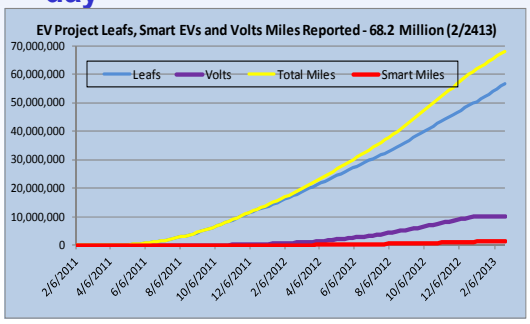
- The EV Project has 44 Databases (DB)
  - Nissan Leaf & GM/OnStar Volt
  - ECOtality Blink, Aerovironment & EPRI EVSE
  - Admin (look up tables, territories, zips codes, QA parameters, etc.)
    - Each of the above six DBs has three versions (process, stage & production) = 18 DBs
  - Four GIS DBs for the Leafs, Volts, Blink EVSEs, and Base (streets, utility service territory areas, etc.)
  - Above 22 (18 + 4) DBs exist on two systems = 44 DBs
- Hundreds of algorithms and thousands of lines of code are required to generate 56,000 data parameters for populating 120 pages of public quarterly reports
- INL must blend multiple data streams, from multiple sources, all on different delivery schedules
- This is not a flat file, spreadsheet experience and this is NOT a simple task

14

EV Project Vehicles / Miles, 2/24/13

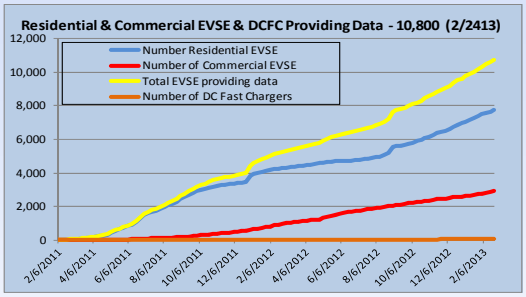
- 7,885 vehicles reporting data
  - 6,300 Leafs. 80%
  - 1,255 Volts. 16%
  - 330 Smart EVs. 4%
- 68.2 million total miles
- 176,000 test miles per day

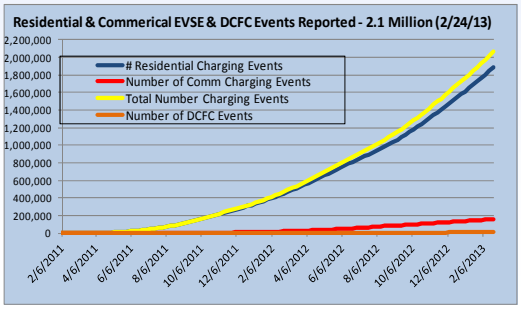




15

EV Project EVSE Deployed / Use, 2/24/13

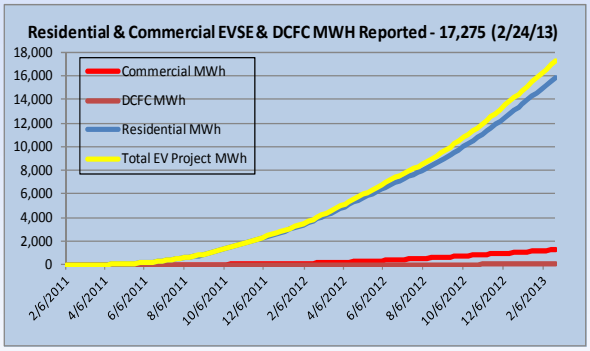




- 10,757 total EVSE
  - 7,762 (72%) Residential EVSE 2,923 (27%) non-residential EVSE
  - 72 (1%) DCFC
- 2.1 million charge events
  - 1,884,508 (91%) Residential EVSE
  - 161,183 (8%) non-residential EVSE
  - 16,820 (1%) DCFC

16

EV Project Charge Energy (MWh), 2/24/13



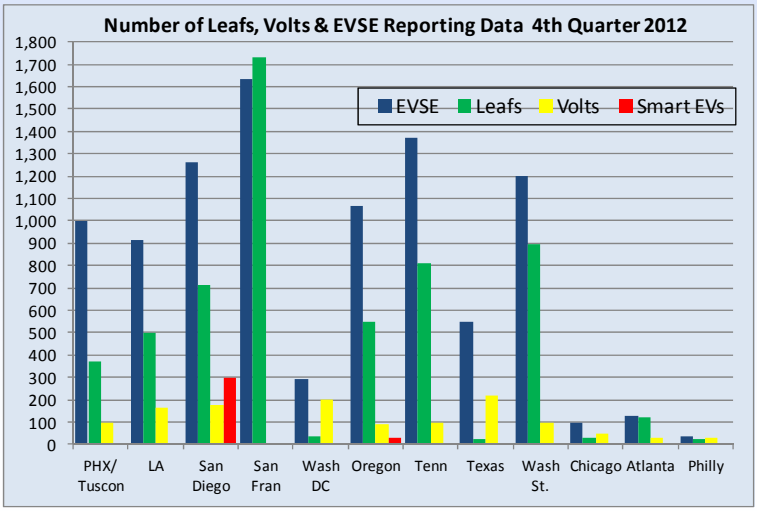
- 17,275 AC MWh total electricity charged
  - 15,880 MWh (92%) residential
  - 1,275 MWh (7%) non-residential
  - 120 MWh (1%) DCFC

- Vehicle efficiency cannot be accurately calculated using total vehicle miles and total energy
  - Non-EV Project vehicles sometimes charge at EV Project EVSE
  - EV Project vehicles may charge at 110V or other 240V non-EV Project EVSE

17

EV Project Overview Report 4th Quarter 2012

- San Francisco has 17% of all EVSE 30% of all Leafs
- Washington DC has 16% and Texas has 18% of all Volts



18

EV Project – National Data

4rd quarter 2012 Data Only

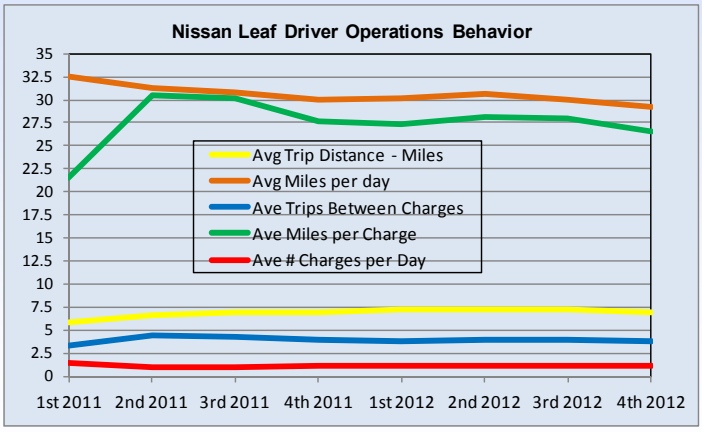
	Leafs	Volts
• Number of vehicles	3,762	1,021
• Number of Trips	969,853	369,118
• Distance (million miles)	6.7	3.0
• Average (Ave) trip distance	6.9 mi	8.1 mi
• Ave distance per day	29.2 mi	40.5 mi
• Ave number (#) trips between charging events	3.8	3.5
• Ave distance between charging events	26.3 mi	28.2 mi
• Ave # charging events per day	1.1	1.4

* Note that per day data is only for days a vehicle is driven

19

EV Project – Leaf Operations Trends

- Trending decreases in average miles per day and average miles per charge

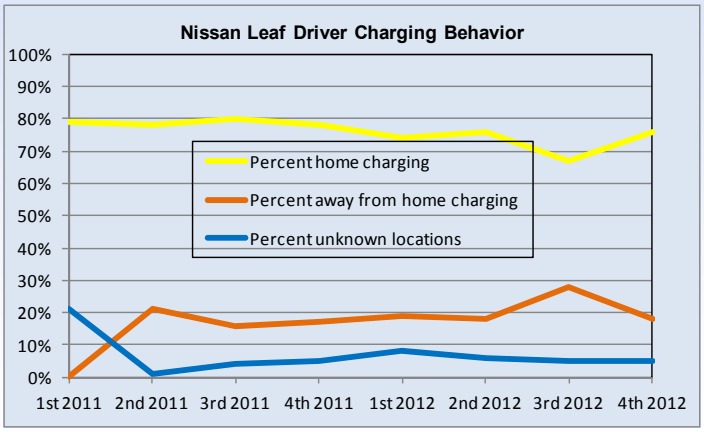


Number of Leafs reporting each quarter with matched EVSE data							
35	956	2,394	2645	2987	2911	3200	3762

20

EV Project – Leaf Charging Location Trends

- 13.4% increase in home charging and 36% decrease in non-home charging as a revenue model is introduced
  - HOWEVER, one data point does not make a trend…..

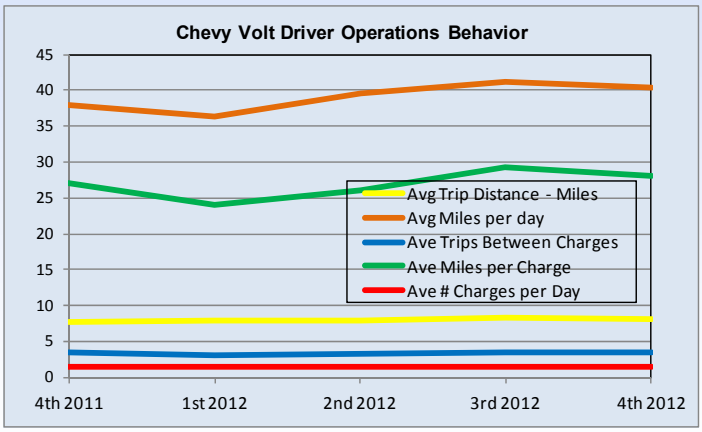


Number of Leafs reporting each quarter with matched EVSE data							
35	956	2,394	2645	2987	2911	3200	3762

21

EV Project – Volt Operations Trends

- Quarterly increases in miles per day and miles per charge reversed last quarter

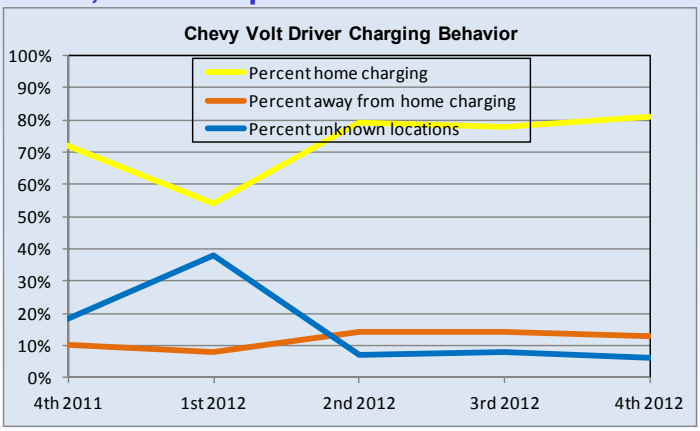


Number of Volts reporting each quarter with matched EVSE data				
45	317	408	809	1021

22

EV Project – Volt Charging Location Trends

- 4% increase in home charging and 7% decrease in non-home charging as a revenue model is introduced
  - AGAIN, one data point does not make a trend…..

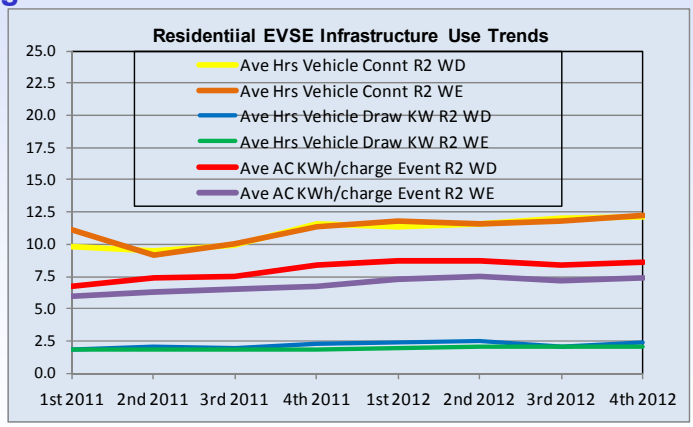


Number of Volts reporting each quarter with matched EVSE data				
45	317	408	809	1021

23

EV Project – Residential EVSE L2 Use Trends

- Continued overall quarterly increases in time vehicles connected, drawing power and AC KWh transferred per charge event



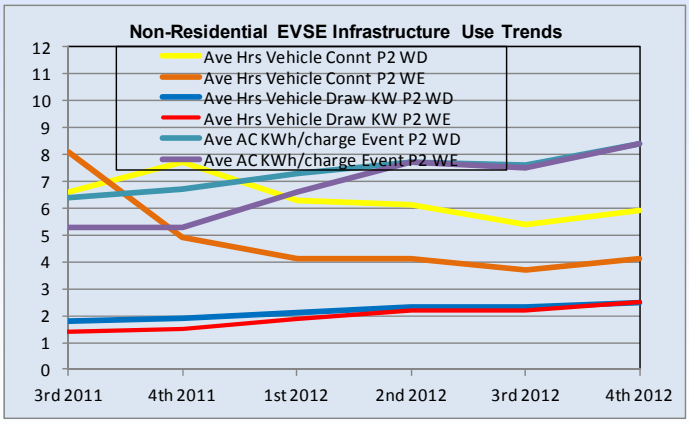
Number of Residential EVSE Level reporting each quarter							
35	955	2413	2704	3324	3338	4020	4819

Residential EVSE Level 2 = R2, Weekend = WE, Weekday = WD

24

EV Project – Public EVSE L2 Use Trends

- Increases in kWh per charge and time energy is drawn
- Average time vehicles connected appears to be rising this past quarter reversing previous trends



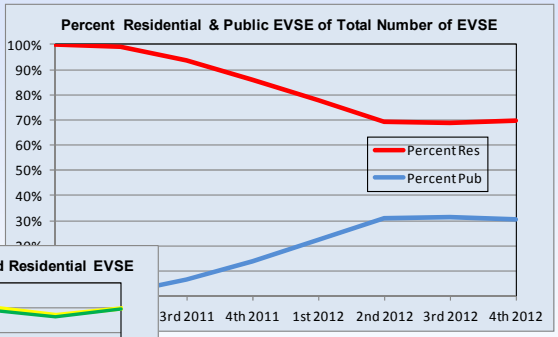
Number of Public EVSE Level reporting each quarter					
170	438	955	1483	1818	1988

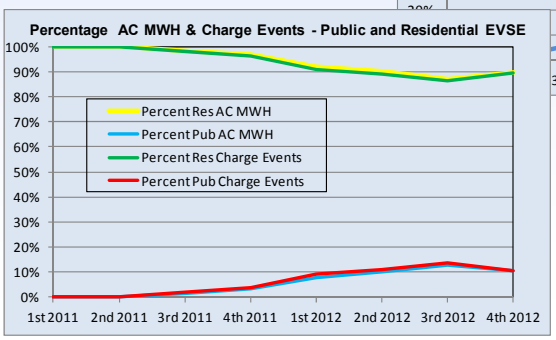
Public EVSE Level 2 = P2, Weekend = WE, Weekday = WD

25

EV Project – EVSE Infra. Summary Report

- Percent of public L2 EVSE deployed was about 30% of all L2 EVSE 4th quarter 2012





- As measured by kWh use and number of charge events, revenue model may be decreasing known public L2 EVSE use

26

EV Project Public L2 EVSE Usage 4th ¼ 2012

- **Public charging contribution of Car Sharing Fleet is significant in San Diego**

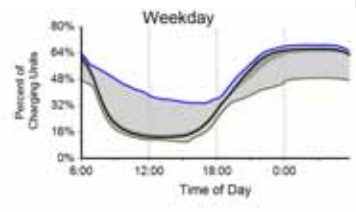
All territories				
Vehicles Charged	Car sharing fleet	Nissan Leaf	Chevrolet Volt	Unknown
Percent of charging events	25%	21%	5%	49%
Percent of kWh consumed	38%	17%	3%	41%
San Diego				
Vehicles Charged	**300 Car2Go fleet**	Nissan Leaf	Chevrolet Volt	Unknown
Percent of charging events	**59%**	16%	2%	23%
Percent of kWh consumed	**72%**	11%	1%	16%
Oregon (Car2Go in Portland)				
Vehicles Charged	30 Car2Go fleet	Nissan Leaf	Chevrolet Volt	Unknown
Percent of charging events	5%	29%	4%	61%
Percent of kWh consumed	11%	27%	4%	58%

27

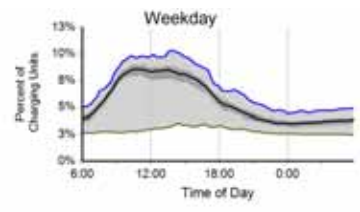
EV Project – EVSE Infra. Summary Report

- **National Residential and Public Level 2 Weekday EVSE 4th Quarter 2012**
- **Residential and public connect time and energy use are fairly opposite profiles. Note different scales**

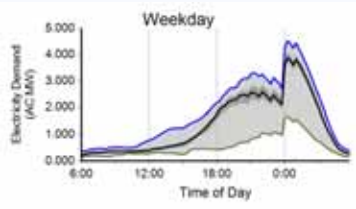
National Residential Connect Time



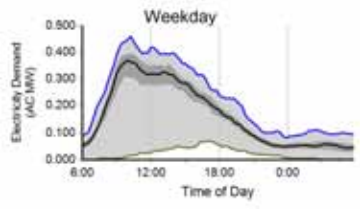
National Public Connect Time



National Residential Demand



National Public Demand

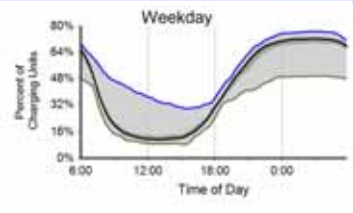


28

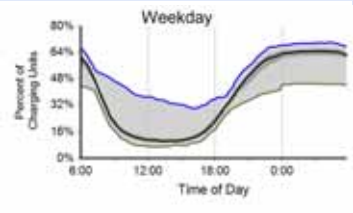
EV Project – EVSE Infra. Summary Report

- **Residential Level 2 Weekday EVSE 4th Quarter 2012**
- **San Diego and San Francisco, with residential L2 TOU rates, are similar to national and other regional EVSE connect profiles**

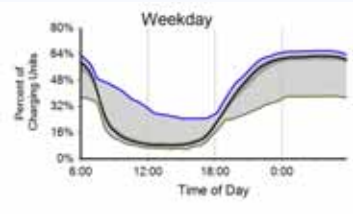
San Diego



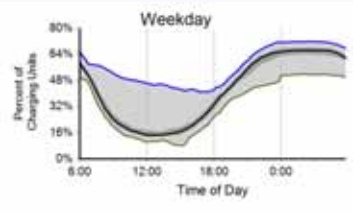
Los Angeles



San Francisco



Washington State

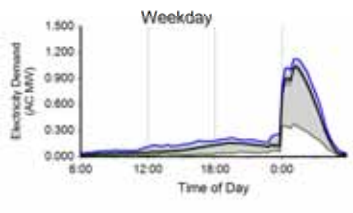


29

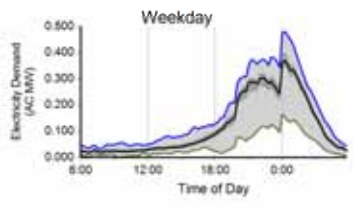
EV Project – EVSE Infra. Summary Report

- **Residential Level 2 Weekday EVSE 4rd Quarter 2012**
- **TOU kWh rates in San Diego and San Francisco clearly impact when vehicle charging start times are set**

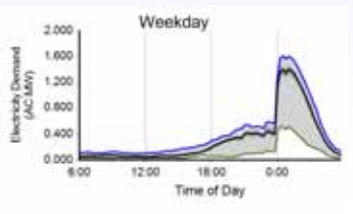
San Diego



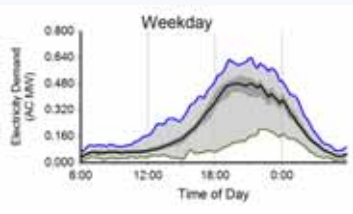
Los Angeles



San Francisco



Washington State



30

EV Project – EVSE Infra. Summary Report

4th quarter 2012	National.
• Ave hours V connected R2 WD	12.1 hours
• Ave hours V connected R2 WE	12.2 hours
• Ave hours V drawing power R2 WD	2.4 hours
• Ave hours V drawing power R2 WE	2.1 hours
• Ave AC kWh/charge event R2 WD	8.6 AC kWh
• Ave AC kWh/charge event R2 WE	7.4 AC kWh
• Ave hours V connected P2 WD	5.9 hours
• Ave hours V connected P2 WE	4.1 hours
• Ave hours V drawing power P2 WD	2.5 hours
• Ave hours V drawing power P2 WE	2.5 hours
• Ave AC kWh/charge event P2 WD	8.4 AC kWh
• Ave AC kWh/charge event P2 WE	6.4 AC kWh

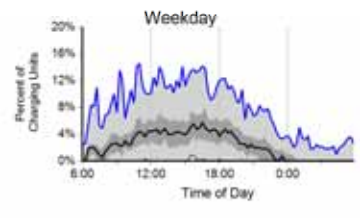
- R: residential, P: public, WD: weekday, WE: weekend, 2: Level 2 EVSE, and V: vehicle

31

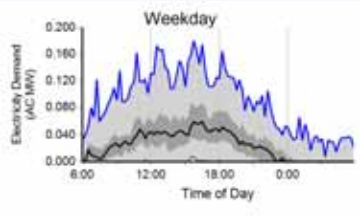
EV Project – EVSE Infra. Summary Report

- DC Fast Chargers Weekday 4th Quarter 2012
- 54 DCFC, 6,089 charge events and 58 AC MWh

Weekday Connected Profile



Weekday Demand Profile



- 1.9 average charge events per day per DCFC
- Leafs 43% charge events and 45% energy
- Unknowns are other charge events and energy
- 19.3 minutes average time connected
- 19.3 minutes average time drawing energy
- 7.2 kWh average energy consumed per charge

32

L2 Access Fees Structure

- 4th Quarter is first widespread implementation of simple and low cost access fees
- Blink member
  - Affiliate credit card with free Blink RFID "In Card"
  - Level 2 access fee of $1.00 per hour of connect time
- Guest - No Blink RFID "In Card" required
  - Guest Code using quick reservation code or website
  - Level 2 access feel of $2.00 per hour of connect time
- Future pricing
  - Pricing to reflect regional electricity rates
  - Cover electricity costs in all cases

33

DC Fast Charge (DCFC) Fees Structure

- Encourage DCFC use with initial free charging
- Implement DCFC access fees by region in 1st Quarter 2013 with beta testing currently underway
- Initial fee structure simple and low cost
  - Accommodate varying vehicle charge rates
  - Accommodate select limitation of charging output power
- Blink member
  - $25 per month unlimited use or $5.00 per session
- Guest
  - $8.00 per session

34

Residential Lessons Learned

- Permit timeliness has not been a problem
- Majority are over-the-counter
- Permit fees vary significantly- $7.50 to $500.00

Region	Count of Permits	Average Permit Fee	Minimum Permit Fee	Maximum Permit Fee
Arizona	66	$96.11	$26.25	$280.80
Los Angeles	109	$83.99	$45.70	$218.76
San Diego	496	$213.30	$12.00	$409.23
San Francisco	401	$147.57	$29.00	$500.00
Tennessee	322	$47.15	$7.50	$108.00
Oregon	316	$40.98	$12.84	$355.04
Washington	497	$78.27	$27.70	$317.25

35

Residential Lessons Learned

- Average residential installation cost ≈$1,375
- Individual installations vary widely
- Some user bias to lower costs

Marlets In Ascending Order Of Residential Installation Cost	Number of Installations	Average Installation Cost	Variation From Project Average
Tennessee (entire State)	542	$ 1,113.07	-19.0%
Arizona (Phoenix & Tucson)	357	$ 1,148.88	-16.4%
Washington DC	3	$ 1,197.44	-12.9%
Oregon (Portland, Eugene, Coralvls & Salem)	465	$ 1,229.06	-10.6%
Washington (Seattle & Olympia)	730	$ 1,289.56	-6.2%
Maryland	39	$ 1,311.75	-4.5%
Washington	80	$ 1,321.36	-3.8%
Virginia	38	$ 1,341.01	-2.4%
San Fransisco	1254	$ 1,386.13	0.9%
Texas (metro Houston & Dallas)	128	$ 1,422.77	3.5%
San Diego	726	$ 1,593.91	16.0%
Los Angeles	415	$ 1,794.64	30.6%

36

Commercial Lessons Learned

- ADA significantly drives cost
  - Accessible charger
  - Van accessible parking
  - Accessible electric and passage routes to facility
- Permit fees and delays can are significant
  - Load studies
  - Zoning reviews

37

Commercial Lessons Learned

- Commercial permits range $14 to $821

Region	Count of Permits	Average Permit Fee	Minimum Permit Fee	Maximum Permit Fee
Arizona	72	$228	$35	$542
Los Angeles	17	$195	$67	$650
San Diego	17	$361	$44	$821
Texas	47	$150	$37	$775
Tennessee	159	$71	$19	$216
Oregon	102	$112	$14	$291
Washington	33	$189	$57	$590

38

Commercial Lessons Learned

- **Demand and energy costs are significant for some utilities**
  - **25¢/kWh**
  - **$25/kW**
- **Some utilities offer commercial rates without demand charges**
- **Others incorporate 20 kW to 50 kW demand thresholds**
- **Nissan Leaf is demand charge free in some electric utility service territories**

No Demand Charges - Nissan Leaf	
CA	Pacific Gas & Electric
	City of Palo Alto
	Alameda Municipal Power
	Silicon Valley Power
AZ	Tucson Electric Power
OR	Eugene Water & Electric Board
	Lane Electric Co-op
TN	Middle Tennessee Electric
	Duck River Electric
	Harriman Utility Board
	Athens Utility Board
	Cookeville Electric Department
	Cleveland Utilities
	Nashville Electric Service
	EPB Chattanooga
	Lenoir City Utility Board
	Volunteer Electric Cooperative
	Murfreesboro Electric
	Sequachee Valley Electric Cooperative
	Knoxville Utility Board
	Maryville
	Fort Loudoun Electric
	Memphis Light Gas and Water Division

Commercial Lessons Learned

- **Especially in California, recurring Nissan Leaf DC fast charge demand charges are significant in many utility service territories**

Utility Demand Charges - Nissan Leaf		Cost/mo.
CA	Glendale Water and Power	$ 16.00
	Hercules Municipal Utility:	$ 377.00
	Los Angeles Department of Water and Power	$ 700.00
	Burbank Water and Power	$ 1,052.00
	San Diego Gas and Electric	$ 1,061.00
	Southern California Edison	$ 1,460.00
AZ	TRICO Electric Cooperative	$ 180.00
	The Salt River Project	$ 210.50
	Arizona Public Service	$ 483.75
OR	Pacificorp	$ 213.00
WA	Seattle City Light	$ 61.00

40

ChargePoint results to date

41

ENERGY | Energy Efficiency & Renewable Energy | VEHICLE TECHNOLOGIES PROGRAM

ChargePoint America Vehicle Charging Infrastructure Summary Report

Project Status to Date through June 2012

ChargePoint America Charging Unit Distribution
Project to Date

ChargePoint Network | INL

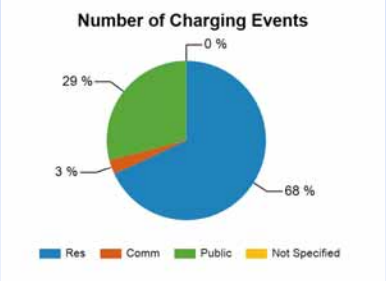
ChargePoint America ARRA Project

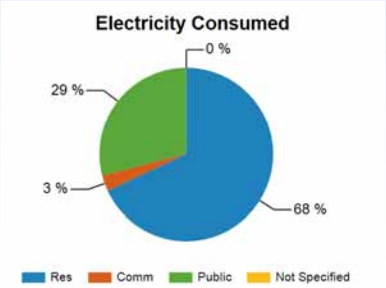
- Conducted by Coulomb
- Project to Dec. 2012
- 3,908 EVSE installed and reporting data
  - 1,763 Residential
  - 193 Private / commercial
  - 1,940 Public
  - 12 unknown
- 760,995 charge events
- 5,359 AC MWh

42

ChargePoint America ARRA Project

- Oct - Dec 2012 data
- 3,541 units
- Percent time vehicle connected
  - Residential 47%
  - Private/com 24%
  - Public 9%
- Percent time drawing power
  - Residential 9%
  - Private/com 5%
  - Public 4%
- EVSE data only

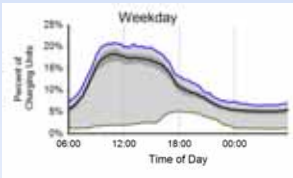




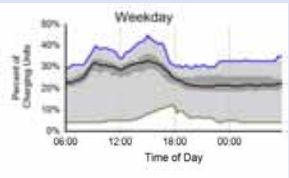
43

ChargePoint America: Oct – Dec. 2012

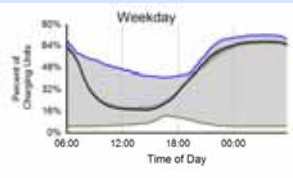
Public Connect Time



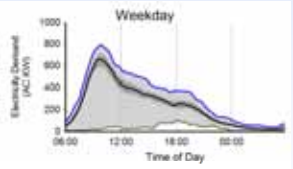
Commercial Connect Time



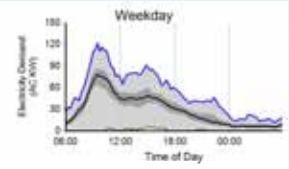
Residential Connect Time



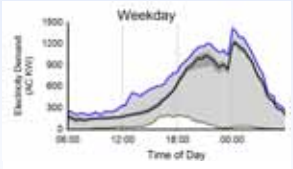
Public Demand



Commercial Demand



Residential Demand



- Public is open access. Commercial are limited access
- Public and commercial reflect at work charging
- Residential reflects end of day return-to-home charging
- Note difference in scales

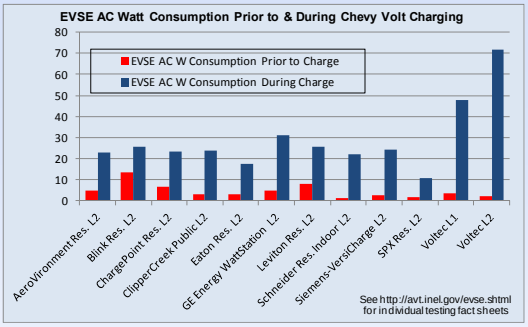
44

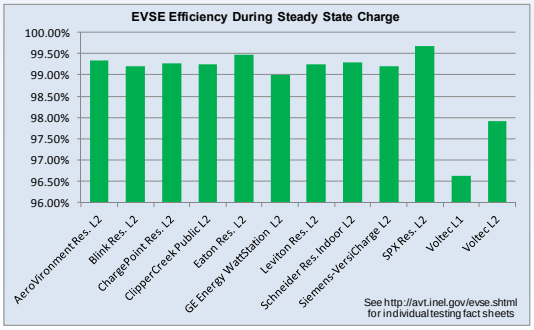
Conductive Charging Infrastructure Testing

45

EVSE Testing

- AC energy consumption at rest and during Volt Charging benchmarked
- Steady state charge efficiency benchmarked

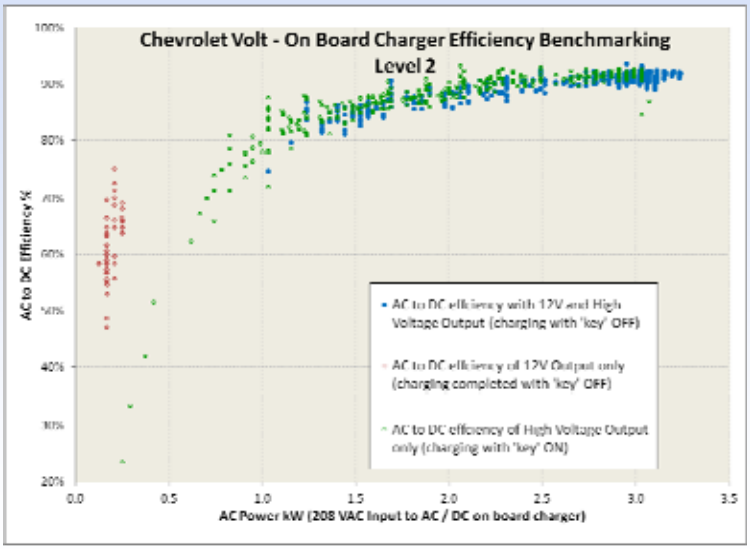




- Most EVSE consume 13 W or less at rest. Higher watt use tied to more EVSE features
- Most EVSE under 30 W during charge
- Most EVSE 99+% efficient during steady state charge of a Volt

46

Conductive System Benchmarking

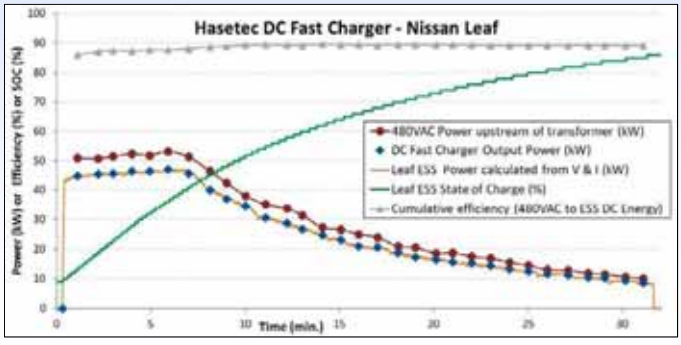


Entire report can be found at: http://avt.inel.gov/pdf/phev/EfficiencyResultsChevroletVoltOnBoardCharger.pdf

47

Hasetec DC Fast Charging Nissan Leaf

- 53.1 AC kW peak grid power
- 47.1 DC kW peak charge power to Leaf energy storage system (ESS)
- 15.0 Grid AC kWh and 13.3 DC kWh delivered to Leaf ESS
- 88.7% Overall charge efficiency (480VAC to ESS DC)



48

DOE Office of Electricity Delivery and Energy Reliability – FOA 554 Smart EVSE Support

- OE selected four awardees
  - Delta Products Corporation
  - Eaton Corporation
  - General Electric Corporation
  - Siemens Corporation (Corporate Research & Technology)
- Two of four NDAs signed and getting close on the others
- INL will conduct "normal" Level 2 conductive EVSE testing as well as communications testing
- INL will also conduct cyber security testing of the deliverables and control/communications systems
- INL is currently conducting cyber security testing of a fifth Level 2 EVSE as part of another project

49

Wireless Charging Infrastructure Testing

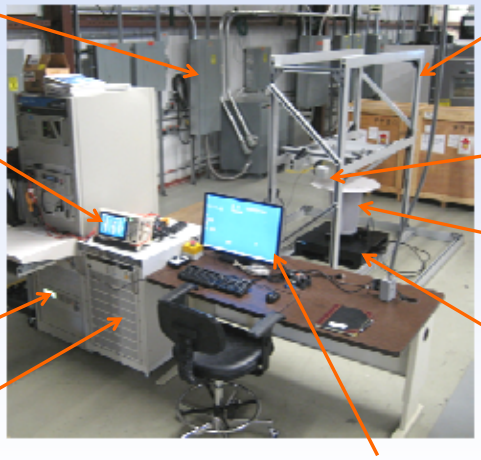
50

INL Wireless Interoperability Test Bed

- INL is a giant wireless test bed for both laboratory and vehicle testing
  - <-30 ºC (winter) and >40 ºC (summer)
  - 100 miles of high speed primary and secondary roads
  - 800 square miles of no measureable background noise
  - 80,000 square foot vehicle support facility
  - Multiple anechoic test chambers
  - 625 battery test channels
- Power, EM Field, and Misalignment impacts
- NDA signed and first two wireless systems will be delivered late this month
- Discussing another system for late April/May
- Developing NDAs other wireless providers
- Supports SAE J2954 committee and UL work and refinement of testing procedures

51

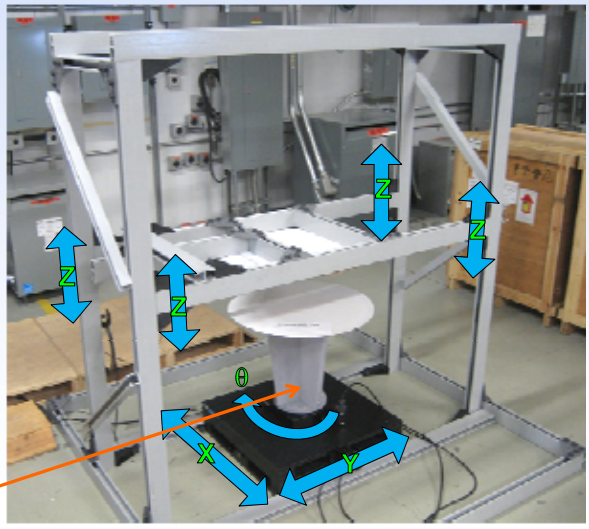
INL Wireless Charging Bench Testing



52

INL Wireless Charger Coil Positioning

- Primary Coil position controlled
- Secondary Coil held in fixed position
- Multi-axis control via LabVIEW software (X, Y, θ)
- Manual positioning in Z direction and Tilt from unequal Z positioning
- NARDA EHP-200a mounted on rail



Polycarbonate Primary Coil Support

53

FOA 667 Wireless Charging Test Support

- In three Phases, test deliverables from FOA 667 awardees:
  - Oak Ridge National Laboratory (Evatran, Clemson University ICAR, General Motors and Toyota)
  - Hyundai America Technical Center Inc. (Mojo Mobility}
- Phase I - Awardees develop production-feasible wireless charging system
  - INL Tests Performed at End of Phase (1 year)
    - Efficiency Test > 85% ?
    - Power Test > 3.3 kW ?
    - Gap Spacing and Alignment Flexibility ?
    - Electric Field Emissions
    - Magnetic Field Emissions
    - Object Detection
    - Power Factor
  - GO / NO GO to Phase II decision

54

FOA 667 Wireless Charging Support – cont'd

- Phase II - Awardees Integrate system into production-intent vehicle
  - INL Tests Performed at End of Phase (another 1 year)
    - Same tests as Phase I
    - And, Vehicle Range (UDDS)
      - PHEV & EREV: > 10 miles
      - EV: > 80 miles
    - Compare performance with J1772 Conductive Charge System
  - GO/ NO-GO to Phase III?

55

FOA 667 Wireless Charging Support – cont'd

- Phase III - Awardees demonstrate 5 vehicles with 5 charging stations
- Awardees provide one vehicle and charging station to DOE within 3 months
  - INL performs evaluations for 3 months
  - Same as Phase II, plus fleet operations:
    - Operational Safety
    - Convenience
    - Reliability
    - Flexibility
- Awardees provide regular transfer of raw data to INL from the other four vehicles

56

Other Testing Activities

Summary

Where you can find this presentation

57

Additional Testing

- Initiated field and lab DC Fast Charge and Level 2 charging study of impacts on battery life in 6 Nissan Leafs
  - Two vehicles driven on road and L2 charged
  - Two driven identical routes DCFC charged
  - One L2 and 1 DCFC in battery lab
  - At 10k miles each vehicle similar minimal capacity fade

- INL conducting with the NFPA and US DOT, PEV traction battery fire demonstrations and suppression project
- INL initiated ~400 New York EVSE data collection with NYSERDA, NYPA, Port Authority of NY/NJ, and Energetics
- 30 EVSE and 10 vehicle conductive interoperability testing conducted with SAE
- Initiated data collection project for six Nissan Leafs in New York City taxi fleet. NDAs being signed and INL will receive data from 6 Level 2 EVSE & 3 DCFCs, vehicles and NYC Taxi & Limousine Commission

58

Summary

- EV Project vehicles connected much longer than needed to recharge - opportunities to shift charging times
- Significant residential Level 2 EV Project charging occurs off-peak with charges starting at midnight. TOU rates indicate consumers are price sensitive
- Revenue models for public charging are currently being introduced – long term impacts?
- Only about 60% of EV Project data collected to date
- DCFC charge events have significant demand impacts and this creates electric utility policy decisions
- How, where, when we measure EVSE and vehicle system charging efficiencies results in significantly different results
- First independent testing of wireless systems will validate SAE testing procedures
- If I only had another 30 minutes I could have 100 slides….

59
