U.S. Department of Energy's Vehicle Technologies Program

DOE AVTA: The EV Project and Other Light-Duty Electric Drive Vehicle Activities @ National Resource Council

Jim Francfort

The Committee on Overcoming Barriers to Electric Vehicle Deployment The National Academies, Washington, DC October 29, 2012

This presentation does not contain any proprietary or sensitive information

Outline

- Participants
- Goals
- Testing experience
- Data processes and data security
- EV Project (Majority of presentation)
 - Description and data parameters
 - Project status
 - Leaf, Volt, and EVSE benchmarking results
 - Lessons learned, summary and future
- Other electric drive vehicle research activities

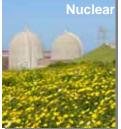

Idaho National Laboratory (INL)

- Eastern Idaho based U.S. Department of Energy (DOE) Federal research laboratory
- 890 square mile site with 4,000 staff
- INL supports DOE's strategic goal
 - Increase U.S. energy security and reduce the nation's dependence on foreign oil
- Multi-program DOE laboratory
 - Nuclear Energy
 - Energy Critical Infrastructure Protection
 - Homeland Security and Cyber Security
 - Advanced Vehicles and Battery Development

, idala National Infrantasy 🧲

 Fossil, Biomass, Wind, Geothermal and Hydropower Energy

3

AVTA Participants

- INL is responsible to DOE for the light-duty vehicle portion of the Advanced Vehicle Testing Activity (AVTA)
- The AVTA benchmarks advanced technology vehicles and subsystems (energy storage is a focus area) for DOE's Vehicle Technologies Program (part of EERE)
- ECOtality provides testing support to the AVTA via a competitively bid contract through NETL (National Energy Testing Laboratory)
- However, ECOtality is the lead for the EV Project
- Test partners include electric utilities, Federal, state and local government agencies, private companies, infrastructure and vehicle manufacturers
- For the EV Project, 7,500+ individual vehicle and infrastructure owners have agreed to be testing partners

AVTA Goals

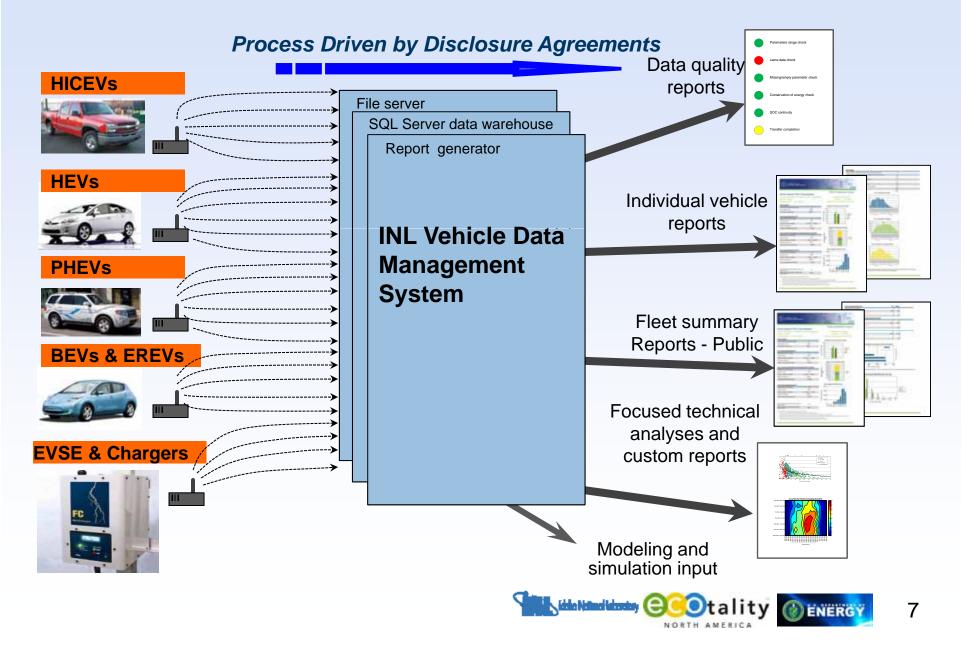

- The AVTA goals
 - Petroleum reduction and energy security
 - Benchmark technologies that are developed via DOE research investments
- The AVTA focuses on:
 - Real world field, test track, and laboratory testing of grid connected, electric drive vehicles and subsystems
 - Advanced energy storage systems
 - Charging infrastructure performance and use
- Confuse people with facts via structured benchmark testing
- Provide benchmark data to National Laboratories, Federal Agencies (DOD, DOI, DOT, EPA, USPS), technology modelers, fleet managers, and vehicle manufacturers to support informed vehicle and infrastructure deployment and operating decisions

Vehicle / Infrastructure Testing Experience

- 66 million test miles accumulated on 9,600 electric drive vehicles representing 110+ models, and 11,000+ EVSE
- Currently, 17,500 vehicles and EVSE provide 125,000 miles and 5,200 charging events of data to INL daily
- EV Project: 6,150 Leafs, Volts and Smart EVs, 7,971 EVSE (electric vehicle supply equipment), 48 million test miles
- PHEVs: 14 models, 430 PHEVs, 4 million test miles
- EREVs: 1 model, 150 EREVs, 900,000 test miles
- HEVs: 21 models, 52 HEVs, 6.2 million test miles
- Micro hybrid (stop/start) vehicles: 3 models, 7 MHVs, 509,000 test miles
- NEVs: 24 models, 372 NEVs, 200,000 test miles
- BEVs: 47 models, 2,000 BEVs, 5 million test miles
- UEVs: 3 models, 460 UEVs, 1 million test miles
- Other testing includes hydrogen ICE vehicle and infrastructure testing

INL Vehicle/EVSE Data Management Process

Data Collection, Security and Protection

- Current AVTA staff have used data loggers on vehicles and EVSE since 1993 to benchmark vehicle and charging equipment profiles
- All vehicle, EVSE, and personal raw data is legally protected by NDAs (Non Disclosure Agreements) or CRADAs (Cooperative Research and Development Agreements)
 - Limitations on how proprietary and personally identifiable information can be stored and distributed
 - Raw data, in both electronic and printed formats, is not shared with DOE to avoid exposure to FOIA requests
 - Vehicle and EVSE data collection would not occur unless testing partners trusted INL would strictly adhere to legally binding NDAs and CRADAs
 - Raw data cannot be legally distributed by INL

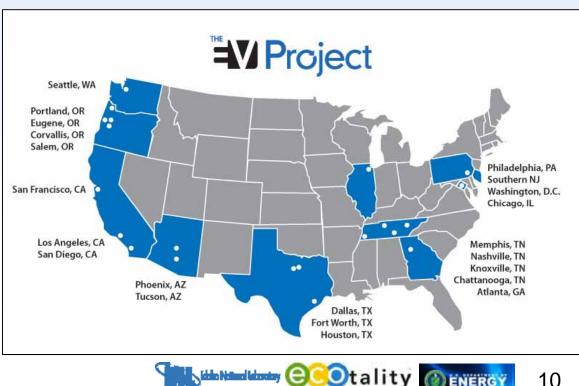

EV Project - Introduction

- ECOtality North America is the EV Project lead, with INL collecting data from the other participants
- Nissan and OnStar/GM are the prime partners, with more than 30 other partners such as electric utilities and air resource boards and state agencies
- \$230 million project (\$115 million grant from US Dept. of Energy and \$115+ million match)
- Project objectives
 - Develop mature charge infrastructure "laboratories"
 - Collect and analyze data characterizing vehicle and infrastructure utilization
 - Demonstrate measures to minimize impacts of charging on the grid
 - Conduct trials of payment systems
 - Develop a sustainable business model for nonresidential charging infrastructure
 - Document and disseminate the results of the EV
 Project

EV Project Deployment Objects

- 8,000 Residential EVSE for plug-in vehicles (Nissan Leaf, Chevrolet Volt & Smart EV)
- 5,000 Non-residential EVSE (workplace, commercial, public, and street side)
- 200 DC Fast Chargers (publicly accessible)
- Deploying in ten states plus the District of Columbia

EV Project – EVSE Data Parameters, Collected per Charge Event

- Data from ECOtality's Blink EVSE network
- Connect and Disconnect Times
- Start and End Charge Times
- Maximum Instantaneous Peak Power
- Average Power
- Total energy (kWh) per charging event
- Rolling 15 Minute Average Peak Power
- Date/Time Stamp
- Unique ID for Charging Event
- Unique ID Identifying the EVSE
- And other non-dynamic EVSE information (GPS, ID, type, contact info, etc.)

EV Project – Vehicle Data Parameters Collected per Key-On and Key-Off Event

- Data is received via telematics providers from Chevrolet Volts and Nissan Leafs
- Odometer
- Battery state of charge
- Date/Time Stamp
- Vehicle ID
- Event type (key on / key off)
- GPS (longitude and latitude)

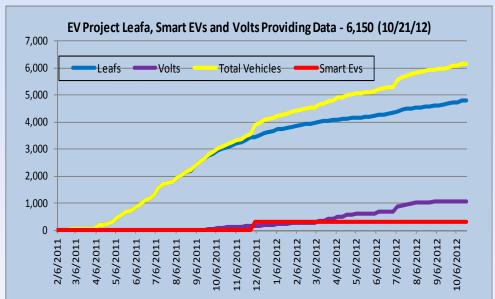

• Recorded for each key-on and key-off event

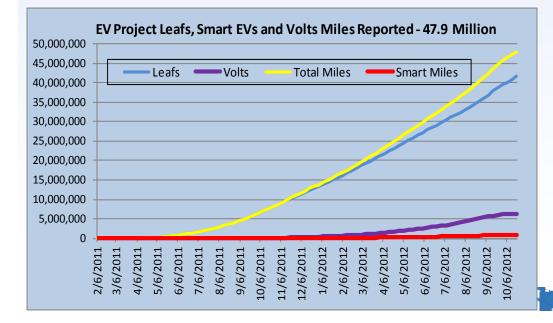

EV Project – Vehicle Deployments / Miles

- 6,150 vehicles reporting data and growing
- 4,798 Leafs, 300 Smart EVs, and 1,052 Volts reporting

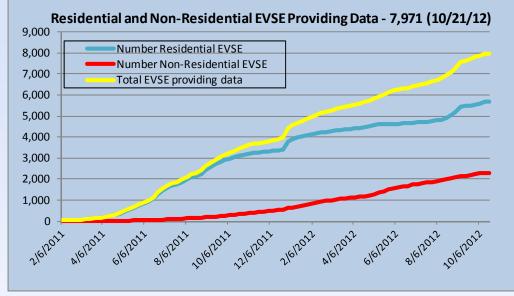

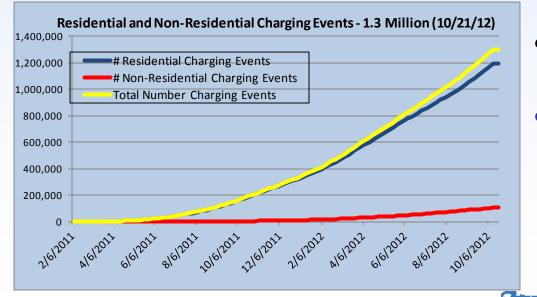

- 48 million total miles
- 125,000 test miles per day
- Data is continuously back-filled

ENERC

EV Project – EVSE Deployment and Use

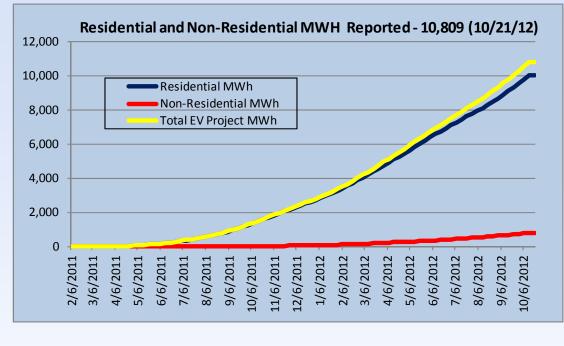

- 7,971 total EVSE reporting
 - 5,676 Residential EVSE
 - 2,295 non-Residential EVSE, includes DCFC
- 1.3 million charge events
- 3,600 charge events per day

14

 Data is continuously back-filled

EV Project – Total Charge Energy (MWh)

- 11,000 MWh total electricity charged
 - 10,000 MWh residential
 - 800 MWh nonresidential
- 32 MWh used for charging per day
- Data is continuously back-filled

15

ENERG

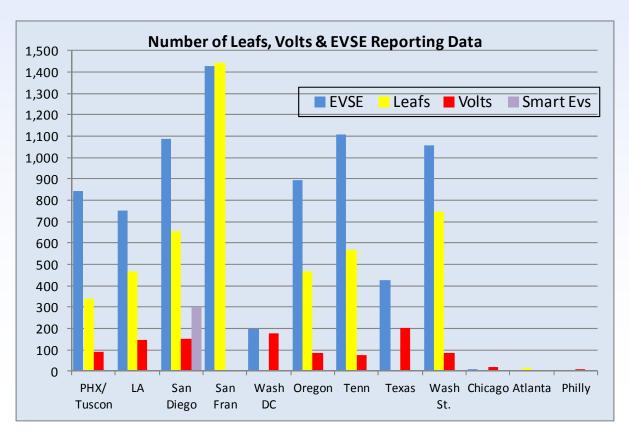

- Vehicle efficiency cannot be accurately calculated using total vehicle miles and total energy
 - Non-EV Project vehicles sometimes charge at EV Project EVSE
 - EV Project vehicles may charge at 110V or other 240V non-EV Project EVSE

🔪 likka National Lakonatary 🧲

EV Project Overview Report 3rd Quarter 2012

- Vehicles and charging infrastructure deployed data @ INL
- Vehicles
 - 46.7 million miles total
 - 6,071 total vehicles
 - 4,719 Leafs
 - 1,052 Volts
 - 300 Smart EVs
- Regional analyses reported each quarter

- Charging infrastructure
 - 7,799 units installed
 - 1,237,703 charging events
 - 10,316 AC MWh

EV Project Vehicle Usage Reports

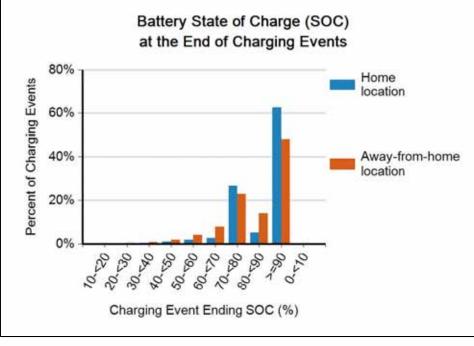

3rd quarter 2012 Data Only	<u>Leafs</u>	<u>Volts</u>
 Number of vehicles 	3,200	809
 Number of Trips 	813,430	286,682
 Distance (million miles) 	5.84	2.39
 Average (Ave) trip distance 	7.2 mi	8.3 mi
 Ave distance per day 	30.0 mi	41.2 mi
• Ave number (#) trips between charging events	3.9	3.5
 Ave distance between charging events 	27.9 mi	29.3 mi
 Ave # charging events per day 	/ 1.1	1.4
 Overall mpg 		136 mpg
 Overall AC Wh/mi 		222

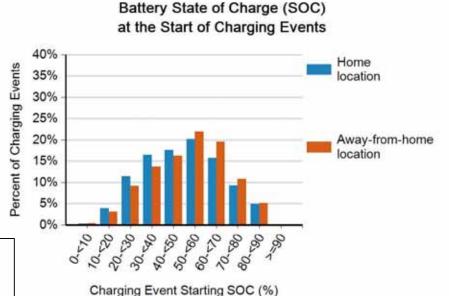

* Note that per day data is only for days a vehicle is driven

% time vehicle drawing power	6%	2%	2%
% of charging events	85%	13%	2%
% KWh consumed	86%	12%	2%

DC Fast Charging impacts on Demand (MW)

• Northwest electric utility service area, 204 units

EV Project Data and Reporting

- EV Project reporting requires INL to blend three distinct data streams from ECOtality, Nissan and OnStar/GM
- Additional data streams from Daimler and a couple of EVSE manufacturers
- INL and ECOtality, with DOE concurrence, identified the type of reports that would be publicly released and all of the EV Project partners agreed (or relented)
- More than 80 EV Project reports are generated every reporting quarter
- More than 130 one time and special request reports have been generated
- 22 additional technical papers, lessons learned, and infrastructure planning reports published
- 55 presentations given

EV Project Lessons Learned – Currently Available

- http://www.theevproject.com/documents.php
- Reports available include
 - DC Fast Charge-Demand Charge Reduction (May 2012)
 - The EV Micro-Climate Planning Process (May 2012)
 - Signage (April 2012)
 - Greenhouse Gas (GHG) Avoidance and Fuel Cost Reduction (June 2012)
 - First Responder Training (March 2011)
 - Accessibility at Public EV Charging Locations (October 2011)
 - Battery Electric Vehicle Driving and Charging Behavior Observed Early in The EV Project (April 2012)
 - A First Look at the Impact of Electric Vehicle Charging on the Electric Grid in The EV Project (May 2012)

EV Project Lessons Learned - Coming

- http://www.theevproject.com/documents.php
 - Need for Commercial Charging
 - Pricing of Commercial Charging
 - Residential Installation Process
 - Commercial Installation Process
 - EV Energy Metering

Permitting Cost (Residential & Commercial)

Residential Lessons Learned

- Permit timeliness has not been a problem
- Majority are over-the-counter
- Permit fees vary significantly- \$7.50 to \$500.00

Region	Count of Permits	Average Permit Fee	Minimum Permit Fee	Maximum Permit Fee
Arizona	66	\$96.11	\$26.25	\$280.80
Los Angeles	109	\$83.99	\$45.70	\$218.76
San Diego	496	\$213.30	\$12.00	\$409.23
San Francisco	401	\$147.57	\$29.00	\$500.00
Tennessee	322	\$47.15	\$7.50	\$108.00
Oregon	316	\$40.98	\$12.84	\$355.04
Washington	497	\$78.27	\$27.70	\$317.25

Residential Lessons Learned

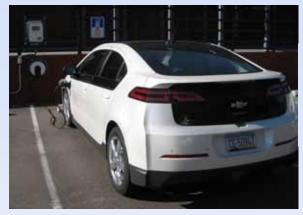

- Average residential installation cost ≈\$1,375
- Individual installations vary widely
- Some user bias to lower costs

Marlets In Ascending Order Of Residential Installation Cost	Number of Installations	Average Installation Cost	Variation From Project Average
Tennessee (entire State)	542	\$ 1,113.07	-19.0%
Arizona (Phoenix & Tucson)	357	\$ 1,148.88	-16.4%
Washington DC	3	\$ 1,197.44	-12.9%
Oregon (Portland, Eugene, Coralvls & Salem)	465	\$ 1,229.06	-10.6%
Washington (Seattle & Olympia)	730	\$ 1,289.56	-6.2%
Maryland	39	\$ 1,311.75	-4.5%
Washington	80	\$ 1,321.36	-3.8%
Virginia	38	\$ 1,341.01	-2.4%
San Fransisco	1254	\$ 1,386.13	0.9%
Texas (metro Houston & Dallas)	128	\$ 1,422.77	3.5%
San Diego	726	\$ 1,593.91	16.0%
Los Angeles	415	\$ 1,794.64	30.6%

- ADA significantly drives cost
 - Accessible charger
 - Van accessible parking
 - Accessible electric and passage routes to facility
- Permit fees and delays are significant
 - Load studies
 - Zoning reviews

• Commercial permits range \$14 to \$821

Region	Count of Permits	Average Permit Fee	Minimum Permit Fee	Maximum Permit Fee
Arizona	72	\$228	\$35	\$542
Los Angeles	17	\$195	\$67	\$650
San Diego	17	\$361	\$44	\$821
Texas	47	\$150	\$37	\$775
Tennessee	159	\$71	\$19	\$216
Oregon	102	\$112	\$14	\$291
Washington	33	\$189	\$57	\$590

- Demand and energy costs are significant for some utilities
 - 25¢/kWh
 - \$25/kW
- Some utilities offer commercial rates without demand charges
- Others incorporate 20 kW to 50 kW demand thresholds
- Nissan Leaf is demand charge free in some service territories

N	No Demand Charges - Nissan Leaf

	San Diego Gas and Electric	\$	1,061.00	
	Southern California Edison	\$	1,460.00	
AZ	TRICO Electric Cooperative	\$	180.00	
	The Salt River Project	\$	210.50	
	Arizona Public Service	\$	483.75	
OR	Pacificorp	\$	213.00	
WA	Seattle City Light	\$	61.00	

EV Project Summary To Date

- EV Project vehicles connected much longer than needed to recharge opportunities to shift charging times
- Significant residential Level 2 EV Project charging occurs off-peak with charge-starts occurring at the midnight starts of super off-peak TOU kWh rates
- Significant opportunities to fully understand how the public uses public versus non-public infrastructure
- Revenue models for public charging are currently being introduced impacts?
- Only about ~40% of EV Project data collected to date
- "Normal" research project process requires:
 - Design and execute the project, data collection completed, data analyzed, and finally, reports issued at completion of experiment
- INL/ECOtality needs to completely collect all data before definitively reporting seasonal trends and behaviors

Future EV Project Data Analysis Subjects

- Pricing elasticity TOU rate influences?
- Regional and seasonal demographics and charging behaviors?
- Density of residential and non-residential EVSE as input to local micro distribution studies – transformer failures?
- Charge control preferences vehicle, Blink and web based, and scheduled versus random?
- Rich public versus non-rich public EVSE charging behaviors?
- Level 2 EVSE versus DCFC behaviors?
- Travel corridor versus convenience charging at stores?
- Length of vehicle ownership and miles per day / week / charge?
- Non-residential subcategories (public and work parking)?
- Etc., etc., etc.?

Additional non-EV Project electric drive vehicle and EVSE benchmarking

Notes: 1 - 7. Please see http://avt.inl.gov/pdf/phev/fordreportnotes.pdf for an explanation of all PHEV Fleet Testing Report notes.

Since these vehicles are flex-fuel capable, some driving events are conducted with E-85, which may decrease fuel economy results

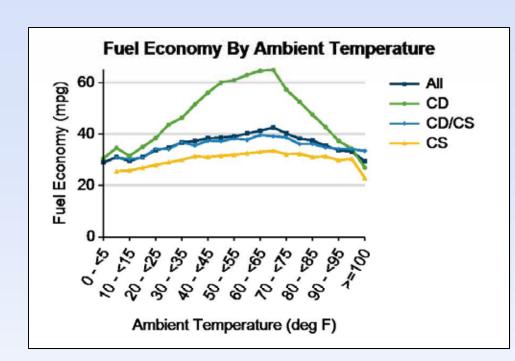

"The Ford Escape Advanced Research Fleet was designed as a demonstration of customer duty cycles related to plug-in electric vehicles. The vehicles used in this demonstration have not been optimized to provide the maximum potential fuel economy."

Notes: 1 - 9. Please see http://art.inl.gov/pdf/phev/chrysleneportnotes.pdf for an explanation of all PHEV Fleet Testing Report notes. This document also includes all report change to date

49%

The Chrysler RAM PHEV Fleet was designed as a demonstration program of customer duty cycles related to plug-in electric vehicles and may not necessarily demonstrate optimized fuel econo

Vehicle fuel economy is based on customer usage and may not be representative of maximum potential fuel economy

odio

Chrysler Ram **PHEV** Project

- **109 Ram PHEVs**
- **Fleet drivers**
- July 2011 to May 2012
- 815,000 test miles
- All trips, 19 mpg, 100 AC & 69 DC Wh/mi. 44 DC Wh/mi captured by regenerative braking
- CD, 23 mpg & 210 DC Wh/mi
- **CS**, 17 mpg

kiden Natural Laboratory

Charging = 35% overall increase in mpg when comparing CD to CS trips

Chrysler Ram PHEV Pickups

- Rams in fleet applications
- Vehicle driving 16% time engine stopped
- Vehicle stopped 23% time engine stopped
- 64.1 miles per charge event
- 7.0 trips per charge event
- 0.89 charge events per vehicle day
- 2.4 average hours per charge event
- 6.4 AC kWh average energy / charge

ENERGY Energy Efficiency & VEHICLE TECHNOLOGIES PROGRAM

ChargePoint [®]America Vehicle Charging Infrastructure Summary Report

Project Status to Date through: June 2012

Charging Unit - By State	Residential	Private Commercial	Public	Not Specified	Charging Units Installed to Date*	Number of Charging Events Performed ^e	Electricity Consumed (AC MWh)
California	791	39	518	3	1,351	213,758	1,487.7
Connecticut	11	4.			11	2,569	15.1
District of Columbia		16	16		32	718	5.4
Florida	43	10	228	2	283	9,323	55.2
Maryland	18	7	46		71	5,956	37.9
Massachusetts	23	7	74		104	4,133	35.5
Michigan	252	14	172		438	60,436	407.1
New Jersey	51	2	17		70	15,397	95.7
New York	23	88	102	-	213	17,401	139.6
Texas	51	9	227		287	17,759	114.4
Virginia	23	17	43		83	10,061	65.0
Washington	12	7	123		142	8,153	50.0
Total	1,298	216	1,566	5	3,085	365,664	2,508.7

ChargePoint America ARRA Project

- Conducted by Coulomb
- Project to June 2012
- 3,085 EVSE installed and reporting data
- 1,298 Residential
- 216 Private/commercial
- 1,566 Public
- 5 unknown
- 367,000 charge events
- 2,500 AC MWh

Includes all charging units that were in use by the end of the report.

² A charging event is defined as the period when a vehicle is connected to a charging unit, during which period some power is transferred.

Public Electric Vehicle Supply Equipment (EVSE)

Report period: April 2012 through June 2012

Individual Charging Event Statistics	Weekday	Weekend	Overall
Average length of time with a vehicle connected per charging event (hr)	2.9	2.2	2.7
Average length of time with a vehicle drawing power per charging event (hr)	1.3	1.0	1.2
Average energy consumed per charging event (AC KMh)	7.06	6.16	6.89

¹ Includes all charging units that were in use during the reporting period and have reported data to the INL

² A charging event is defined as the period when a vehicle is connected to a charging unit, during which period power is transferred

Note: Weekends start at 6:00am on Saturday and end 6:00am Monday local time

Charging Event (H)

- Private/com 4% \bullet
- Public 3% \bullet
- **EVSE** data only

WD WE

Additional PEV and Infrastructure Testing

- Conducting testing of "dumb" and "smart" EVSE
- Initiated wireless charging test program
- Initiated field and lab DC Fast and Level 2 charging study of impacts on battery life in 6 vehicles
- Conducting first responders training program with the National Fire Prevention Association and NHTSA
- Battery mule test vehicle provides field testing of traction battery packs at any power and efficiency level
- DOD micro climate base studies for charging infrastructure and PEV deployments
